BE HUNGRY

STAY
Conceived in Ecuador’s City of Knowledge, Mobomo has always been inspired by a deeper sense of purpose. It was here that I watched avocado farmers operate a fully sustainable ecosystem powered entirely by hummingbirds. Every step had intention, nothing was wasted, and the results were truly magical. The spirit of that place still drives us daily.

Barg Upender
Founder + Dreamer
mobomo
PUSH. If there is a single word that summarizes our attitude toward pretty much everything, it is this. We push ourselves. We push technology. And we push the boundaries of conventional thinking.

We are Mobomo—a team of engineers, artists, and developers with the hunger to challenge the impossible, and the structure and skills to actually pull it off. We are nerds in a nest and lightning in a bottle—a fusion of creative excellence driven to build the next generation of technological badassery.

Did you notice that hummingbird in our logo? That’s no icon, that’s our symbol. Hummingbirds are flying ninjas—focused, energetic, and wickedly fast. They are the perfect visual representation for who we are and how we work.

What follows are the eight guiding principles that define how we think. Call it our code base, our framework, or whatever other development analogy you can imagine. Point is, the hummingbird is our symbol and these beliefs form its backbone.
THE MOBOMO CODE
8 principles that guide and inspire everything we do.

01 THINK BIG(ER).
Let’s leave the simple to everyone else.

02 BUILD WORK WE BELIEVE IN.
Everything here is a passion project.

03 THINK AS ONE.
Welcome to the clan.

04 ESTABLISH TRUST.
Keep ‘em happy.

05 MOVE FAST.
They’re called sprints for a reason.

06 STAY LEAN.
Let’s remain scrappy.

07 QUESTION EVERYTHING.
Never settle for the status quo.

08 KEEP PUSHING.
Walls are not welcome here.
Leveraging Drupal, we saved NASA a tremendous amount of time and money.
THINK BIG(GER).

It’s easy to run from challenges, and it’s far too convenient to blame constraints. But that’s not how we roll. We decided long ago that complacency was just not in our DNA, so we developed what we like to call a culture of yes. While others run for safety, we jump into the fire. We take on the world’s most complex projects, and we deliver them on time and on budget. For as long as we can remember, we’ve defied expectations and embraced the insurmountable, and we’re still just getting warmed up. So bring us the impossible, and let’s leave the simple to everyone else. You’ll find us out front polishing the corners of the bleeding edge.

Mobosso migrated www.NASA.gov—a site with more than 250,000+ pages and three TBs of data—over to Aumaon, Cloud and Drupal. We completed the entire effort in just 13 weeks and won a highly coveted Webby Award along the way.
Vested provides an elegant, intuitive payment processing flow to facilitate citizen-powered, social impact investing.
BUILD WORK WE BELIEVE IN.

We like making things. We like taking problems, twisting them into ideas, and developing them into solutions. We work with cool clients doing important things, and we wouldn’t have it any other way. When you believe in what you build, most of the other pieces just seem to fall in place. You attract all the right people, and they bring pride and ownership in everything they do. We believe strongly in our clients, and if you take a good look at our work, you’ll see that belief reflected throughout.

This app equips Calvert Foundation with real-time reporting and a robust, user-friendly dashboard for tracking comprehensive metrics.

Our team was tasked with solving unique UI challenges that come with fast transitions and communicating with consumers at varied technical proficiency. The result is a remarkably user-tailored online platform where individuals can invest as little as $20 in the causes and places that matter to them.
Getting each and every feature just right for a user base is no small task—especially when that base consists of more than 20 million power-users.

We architected an original caching system that minimizes the load on The Knot’s servers, allowing the site to function seamlessly and consistently at optimal levels.
THINK AS ONE.

We are not numbers here, and this is not the matrix. We are a family and our clients here are everything. Our team is driven by empowerment, and every one of us has sleeves rolled up to our elbows. Here, camaraderie is currency and commitment is everything. Our unity is the lifeblood that courses through this place, and our dedication to each other is the fuel that powers us through late nights and big challenges.

Our team customized The Knot’s Guest Services app to include powerful capabilities, such as syncing with Gmail and Facebook, pulling hashtag-specific photos from Instagram, and enabling seamless integration with various wedding registries.
ESTABLISH TRUST.

Success here is as much about trust as it is about technology. And trust begins with happy clients. Keeping our clients happy is not a box we check off on a generic list of responsibilities, it is the driving force behind everything we do. This business is ruled by reputation, and we will win on service every single time. We’re conduits and catalysts—our clients come to us for guidance and look to us for leadership. Their success is our own, and their trust is a privilege that we carry with honor.

“Business demands efficiency. Custom-built software enabled Mars to accelerate internal processes that were previously archaic.”
From social media apps to retail stores’ auditing tools, we provided MARS with a broad variety of simple solutions for highly complex problems. We even built an internal social network, Behaviors That Matter, which is used to recognize commendable staff efforts within MARS.
MOVE FAST.

This industry favors the fleet, and we move faster than anyone. Our speed begins at the first stage of a client engagement and accelerates throughout the process. While others are waiting for the ink to dry on a proposal, we’re already knee deep into prototyping. Time is a luxury, but for our clients, it is seldom an option. For that reason, we have developed The Mobomo Way – a framework for development that keeps our processes lean, our projects effective, and our agency humming.
Through social media, Pick Remit users can share transaction provider details, currency information, and other important findings with friends.

Pick Remit offers transparency and ease of use to immigrants sending money to loved ones in their home country or other foreign places.
STAY LEAN.

There is something very effective about the mentality of a startup. Too often, we’ve seen successful organizations become bloated and slow, more concerned about appearance and hierarchy than clients and creativity. Not us. We refuse to succumb to that space. We fundamentally believe that you need structured chaos to do anything worthwhile, and that is exactly what you will find here. You won’t encounter a lot of slick salespeople or sit in planning meetings to discuss other meetings. We build fast, learn quickly, and evolve daily. Why would we ever change that?

Recognized as the leader in player development for the past 21 years, Baseball Factory provides world-class instruction, life-changing experiences, and new opportunities to help student-athletes achieve their dream of playing college baseball.
We integrated our own highly complex algorithm with a select few existing gaming tools to create a grand slam app.

A gyroscope was implemented to help observe movement on the device for the Balance exercise.
QUESTION EVERYTHING.

In this industry, complacency is the villain, and death usually occurs by stagnation. The world moves quickly, and it is far too easy to fall for the familiar and embrace the expected. But what fun would that be? We are entering a new era in technology and it is going to be awesome. Refrigerators are speaking to watches, cars are chatting with the road, and everything is becoming increasingly digital. Our people geek out on this stuff. They daydream in pixels, obsess about technology, and fall asleep with fresh ideas still racing through their heads.

By designing and developing with multiple devices in mind, we built a clean and streamlined tool which virtually anyone can use to categorize, prioritize, and track bills through each step in the legislative process.
Our redesign of MultiState’s site streamlines information into digestible, user-friendly amounts, and offers visitors a simplistic experience at every turn.
KEEP PUSHING.

Walls are not welcome here. Simple as that. Walls make us smaller. Less effective. More predictable. Few pioneers are left in this industry, but we are determined to remain among them. We are on a quest for greatness, and that requires blazing our own trail. We will refuse to accept a label or follow the path of conformity that others have laid before us. What we are building here simply does not exist anywhere else. It’s time to give the big boys a run for their money.

Users can now track metrics such as latency, bounce rate, and email engagement via an all-in-one dashboard, ultimately allowing them to tailor and optimize email campaigns.

SPARKPOST | THE NEED FOR SPEED
In just four months, we designed and engineered the entire SparkPost user experience.

With notable clients such as Facebook and LinkedIn, Message Systems wanted to expand its on-site offering to a cloud-based solution. Motoomo built SparkPost, an email delivery service that provides the same deliverability, scalability, and speed as the biggest vendors in the world.

Upgrade to the most advanced email delivery service. Period.
Within blankness lies possibility. The secret lies in the ability to see something within the nothing and to recognize the beauty that has yet to unfold.

We would be thrilled to build something great together. Let’s get started!
